PRO2000 FILTERS

FOR RESPIRATORY PROTECTIVE EQUIPMENT

SCOTT SAFETY
Combining low weight and low breathing resistance, Scott Pro2000 filters are manufactured using superior performance media, giving extended adsorption capacity for gas and combined filters and unrivalled efficiency for the particle element. Pro2000 filters are fully EN approved to the latest standards, marked ‘R’ for re-usable (EN 143:2000/A1:2006), CE certified, and connect via a 40 mm EN148-1 thread. CE approvals: EN143, EN14387, CE0121.

**PRO2000 FILTERS**
- Particle filters trap solid and liquid particles, e.g. dusts, smoke, welding fumes, mists, micro-organisms and radioactive particles
- Gas filters protect against hazardous gases and vapours
- Combined filters protect against both gaseous and particulate contaminants

**PARTICLE FILTERS**
- Scott particle filters use only microfibre ‘paper’ media and do not use any electrostatic filtering method. They are marked ‘R’ for “reusable” (EN 143/A1:2006)
- PF10 P3 features a high capacity filter element; it removes even the smallest particles with efficiency better than 99.99 %
- The filter element is extremely water-repellent (hydrophobic)

**GAS FILTERS**
- Use the highest grade active carbon materials, additionally treated for best performance
- With a safe margin to EN requirements, Pro2000 gas filters perform effectively using only 220–320 ml of carbon
- Less carbon provides low weight and less resistance – real benefits for the user

**COMBINED FILTERS**
- Combined filters remove hazardous gases and vapours as well as solid and liquid particles
- The particle filter removes aerosol-based particles such as paint droplets. When spraying liquid substances (e.g. spray-painting) a combined filter should be used.

**HOW TO SELECT A FILTER**
- Will the atmosphere contain sufficient oxygen throughout the period of exposure?
- Which hazardous substances are likely to be present? What are their physical and chemical properties?
- Which forms do the airborne contaminants take – dust, fibre, mist, fume, microorganism, gas, vapour, radioactive particulates or gases?
- What health effects can these substances have on the body? Special attention is needed if there are several substances that may interact, either by reacting chemically, or by having synergistic adverse health effects.
- What are the concentrations in the atmosphere?
- What are the relevant occupational exposure limit values or the safe exposure levels?

A filtering device should have the correct type of filter matched to the substance(s) from which the wearer needs protection. The maximum mass of filter designated to be connected to a half mask is 300g and to a full face mask 500g. Filters are colour coded, marked with type and class, as well as labelled with the shelf life as factory sealed. The filter label includes the “CE” mark and EN standard number(s), and markings relevant to particular types; if for a powered respirator, the device class.

</tr>
</tbody>
</table>

1) BS 4275

PARTICLE FILTER OPERATION LIFE

- The filter does not wear out but gets clogged with particles and/or moisture. A particle filter must be replaced when breathing resistance has increased.
- When used against radioactive substances and micro-organisms a particle filter is recommended for single use only.
- Scott particle filters use only microfibre ‘paper’ media and do not use any electrostatic filtering methods. Pro2000 filters are fully EN approved to the latest standards, marked ‘R’ for re-usable and CE marked. Shelf life for Scott particle filters is 10 years.

THE RISK CAUSED BY PARTICLES DEPENDS ON:

- The physical, biological and chemical properties of the contaminant
- Particle size and form
- Concentration in the ambient air and exposure time
- Work pace; the more rapid respiration, the more particles are inhaled

Physiological effects of particulates on the human body

<table>
<thead>
<tr>
<th>Inert dusts</th>
<th>Minor effects of concentration: e.g. &lt;5 mg/m³ slight irritation, &gt; 30 mg/m³ high irritation.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mineral dusts, e.g. silica dust, quartz</td>
<td>Detrimental, hazardous effects; changes in lung tissues, cancer</td>
</tr>
<tr>
<td>Metal fumes and dusts, e.g. lead, chromium, cadmium, mercury, poisonous particles</td>
<td>Pneumoconiais, bronchitis, asthma, inflammation, cancer</td>
</tr>
<tr>
<td>Manufactured fibres, e.g. asbestos and other fibres</td>
<td>Pulmonary fibrosis, mesothelioma, cancer</td>
</tr>
<tr>

</tbody>
</table>

### Combined Filters

Combined filters remove hazardous gases and vapours as well as solid and liquid particles. The particle filter removes aerosol-based particles such as paint droplets. When spraying liquid substances (e.g. spray-painting) a combined filter must be used.

Pro2000 Filters

Used in conjunction with the Scott Safety Respiratory range, Pro2000 Filters offer a high performance solution to a wide range of respiratory hazards. Pro2000 filters can be utilised with both negative pressure and powered air respirators.

RESTRICTIONS ON USE

Standard filtering respirators do not protect against certain gases, e.g. CO₂ (carbon dioxide)

The storage time (month and year) for a filter is marked on the filter label. The above-mentioned storage times for Pro2000 filters are for a factory sealed filter package. Filters are sealed in plastic or foil bags by the manufacturer. Manufacturer recommends storage at -10...+50 °C temperature and relative humidity below 75%.

After use, an opened filter must be wrapped closely, if it is likely to be reused, and it must be replaced not later than within 6 months.

If the user identifies the breakthrough of the gas by smell, taste or irritation factor the filter must be replaced.

When a hazardous gas has an olfactory threshold higher than the occupational exposure limit it produces no clear breakthrough sign. In these cases special directions regarding the calculated lifetime are required.

The filter must be changed if the breathing resistance has increased noticeably.

Maximum permitted time for use of the mercury filter Hg-P3 (applies also to filters A2B2E2Hg-P3, A1E1Hg-P3, Reactor Hg-P3) is 50 hours (EN14387).

AX-filter is for single use only, and should be replaced after each shift (EN14387).

Against radioactive substances and microorganisms a particle filter is recommended for single use only.

FOR MORE DETAILED INFORMATION ON FILTER CHOICE, USE, STORING, MAINTENANCE AND DISPOSAL, SEE SCOTT INSTRUCTIONS FOR USE SUPPLIED WITH SCOTT PRODUCTS.
